

# CASE STUDY EMPLOYEE RESOURCING

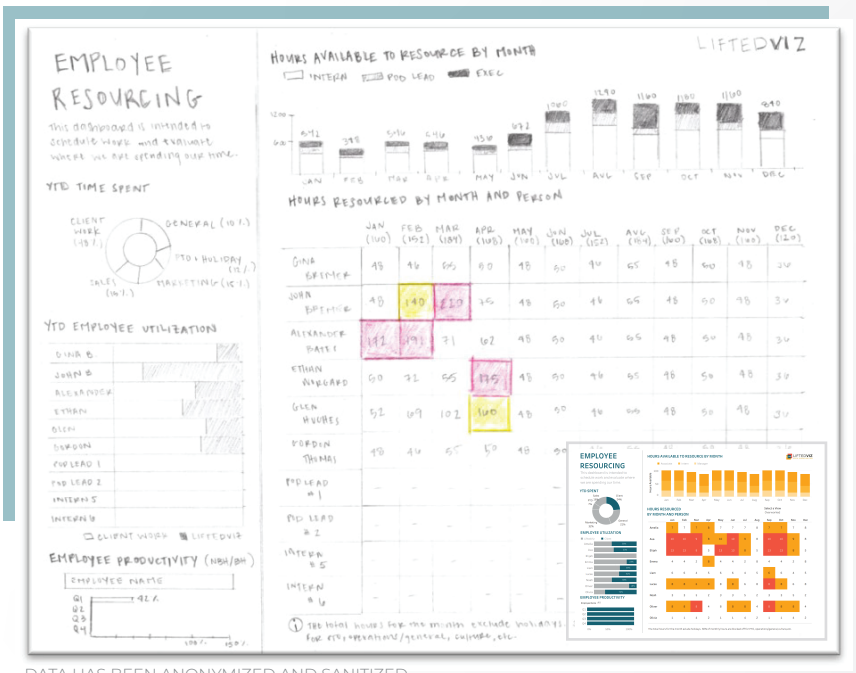

## PROJECT GOAL

Create a dashboard that provides clear insight into what work is scheduled for each team member in order to **increase efficiency in planning and scheduling** future projects and to protect against overextending the team.

## SERVICES

Complete the LV5D process to define, design, dataprep, develop and deliver a fully-functioning dashboard with reference and maintenance documentation.

## DELIVERABLES AND RESULTS

The LiftedViz team worked within our LV5D project framework in order to streamline and optimize the dashboard development process. We used our requirements and **design first approach** to validate project goals and deliverables with our stakeholder(s) prior to the time-consuming data preparation and development steps. By **sketching the proposed dashboard solution**, we were able to get feedback and buy-in early enabling a seamless transition into dataprep, development, delivery, and adoption of an insightful Tableau dashboard.

## ACTIONS NOW SUPPORTED BY THE DASHBOARD

**Schedule** new client work based on team availability

**Redistribute and balance work** between team members

**Increase efficiency** in resourcing employees on projects

**Accelerate procurement** of new business

**Inform hiring** decisions when work exceeds bandwidth

**Decrease project management time** to review employee workloads
